## Abstracts

### Report Scope:

The report provides an overview of the global 3D printable concrete market and analyzes market trends. The base year considered for analyses is 2022, while the market estimates and forecasts are given from 2023 to 2028. Revenue forecasts for this period are subdivided based on building type and region. The market estimates are only provided in terms of revenue, USD million.

For preparing accurate quantitative estimates for 2022, we have only included the revenue generated from 3D printable concrete sales within buildings that are greater than 10 meters square or 110 square feet and are situated outdoors. In addition, the walls must have been fully 3D printed. However, qualitative insights and analyses entail all kinds of structures and buildings 3D printed with concrete.
