Abstracts

REPORT SCOPE

Although the term biodegradable polymers is well known, the controversy within the industry as to which materials should be considered biodegradable continues unabated. These resins currently include polyolefin-based compositions containing starch and polymers containing aromatic groups that microorganisms have difficulty utilizing in their metabolism.

Furthermore, there are additives said to convert petroleum-based resins to biodegradable versions. These resultant resins are said to be oxo-biodegradable.

Part of the current debate revolves around defining an acceptable period for biodegradation to be completed. Almost all carbon-based materials are biodegradable, if given an acceptable period.

This report includes polymers that producers market as fully biodegradable. Most define a fully biodegradable polymer as a polymer that is completely converted by microorganisms to carbon dioxide, water and humus.

In the case of anaerobic biodegradation, carbon dioxide, methane and humus are the degradation products. However, many within the industry insist on a period for degradation such that the terms biodegradable and compostable are not synonymous.

The issue concerning biodegradable versus compostable resins is a very important issue that is discussed in detail. Polymers derived from renewable resources (non-petroleum-based) are not covered unless they are considered biodegradable since

many polymers derived from renewable resources are not biodegradable. These materials are often termed as bio-based. Some polymers are both bio-based and biodegradable.

The scope of the report covers the overview and clear understanding of the global market scenario of biodegradable polymers and analysis of global market trends, with market data from 2016, considering 2016 as the base year and estimates for 2017 to 2022 with projection of the compound annual growth rate (CAGR) in the forecast period.

This report covers the chemical types of biodegradable polymers along with their properties, production, producers and applications. Definitions and standards, market drivers, biodegradation testing, environmental issues, composting and relevant technologies will also be discussed.

The different chemical type of biodegradable polymers is considered in the report which include: polylactic acid (PLA), starch based and polyhydroxyalkanoates (PHA). Qualitative analysis of protein based products, biodegradable polymers from soybeans, genetically modified (GM) biodegradable polymers and oxo-biodegradable polymers are also covered in the report. The report further includes a discussion of the application of biodegradable polymers such as packaging, fibers/fabrics, agriculture, medical, food service, electrical and electronics and automotive, among others.

The report concludes with a special focus on the competitive landscape which includes the key strategies adopted by the manufacturers and detailed profiles of the major manufacturers, their product offerings, strategies, including trade names and their impact on the market.

REPORT INCLUDES

47 data tables and 50 additional tables

An overview of the global markets for biodegradable polymers

Analyses of global market trends, with data from 2016 and 2017, and projections of compound annual growth rates (CAGRs) through 2022

Discussion of chemical types of biodegradable polymers along with their properties and production processes

Evaluation of current and potential applications

Comprehensive company profiles of major Players in the Market including Basf, Biomer, Cereplast, Danimer Scientific, Earthshell Container Corp., Mitsui Chemicals, Toray Industries, Inc., and Toyobo Co., Ltd.

SUMMARY

The term “polymer” is derived from the Greek words polu, meaning “many, much” and meros meaning “parts” which refer to a molecule’s structure that is composed of multiple repeating units. Biodegradable polymers are comprised of monomers that are linked to another functional group and have unstable links behind the functional group. Biodegradable polymers break down into carbon dioxide, nitrogen, water, biomass and inorganic salts. Biodegradable polymers are decomposed under both aerobic and anaerobic conditions by enzymes and the presence of microorganisms.

The global market for biodegradable polymers is expected to grow because of its high demand in a broad range of end-user industries across globe. Although biodegradable polymers have been commercially available for 20 years, they are still considered very early in their product life cycle. This market faces several major problems; most importantly are relatively high prices and the lack of an infrastructure for effective composting, an extremely critical aspect for biodegradable polymers market success.

The biodegradable polymers market is expected to continue its high growth over the next five years dominated by packaging and followed by fibers/fabrics. The packaging segment accounted 78.5% of the total value in 2017. Most of the remaining applications of biodegradable polymers will experience considerable growth rates partly because of the low market numbers.

The fibers/fabrics market will experience a substantial growth, especially from the hygiene and agricultural end-uses that includes mulching films. The medical application segment of biodegradable polymers is anticipated to experience the highest growth rate among all the biodegradable polymers applications in coming years.

Contents

CHAPTER 1 INTRODUCTION

Market Introduction
Study Goals and Objectives
Reasons for doing the Study
Scope of Report
Intended Audience
Methodology and Information Sources
Geographic Breakdown
Analyst's Credentials
Related BCC Research Reports

CHAPTER 2 SUMMARY AND HIGHLIGHTS

CHAPTER 3 TERMINOLOGY

Background
Environmental Issues
Bio-Based
Degradable and Biodegradable
Compostable Vs. Biodegradable

CHAPTER 4 BACKGROUND/HISTORICAL

Overview
The Biopolymer-Synthetic Polymer Gap
Niche Market
A New Emphasis
Environmental Problems Persist
Integration of Biodegradable Plastics with Disposal Infrastructure
Early Starch-Based Materials
Continued R&D
Early Entrants
The Importance of Loose-Fill
Other Factors
Biopolymers, Conventional Plastics and Plastics
Natural or Synthetic

The Move to Renewable Sources
Extending the Recycling Loop
Processing
Properties
Defining Biodegradable Polymers
Public Attitudes
Environmental Issues
Composting

CHAPTER 5 DEFINITIONS AND STANDARDS

Overview
Confusion in Biodegradable Definitions
Technical Aspects
Background
The Term 'Bio-Based' Often is Confusing to Consumers
Non Uniform Degradable Tests
Overview
Oxo-Bio Standards
Hydro-Bio Standards
ASTM D-6400
Conclusions
Summary of Standards

CHAPTER 6 TECHNICAL ASPECTS OF THE DEGRADABILITY OF RESINS

Polyolefins
Polystyrene
Polyvinyl Chloride (PVC)
Other Thermoplastics and Thermosets
Modes of Degradation of Selected Biodegradable Polymers
Effect of Polymer Structure on Biodegradation
Background
Morphology
Effects of Environmental/Exposure Conditions on Biodegradation
Background
Early Regulations
Significance of Moisture, Temperature and/or Oxygen
Role of Microorganisms

Presence of Methane
Increasing Decomposition in Landfills
Function of Compost Operations
Other Factors
Conclusions
More Details on the Concept of Composting
Overview
Background
Key Properties for Compostable Plastics
Materials that Meet Specifications
Compost Stream and Infrastructure
Compostable Plastics
Biodegradability and Compostability
Restrictions on Compostable Claims
Standards and Specifications
What are the Challenges of Using Compostable Plastics?
U.S. Activities
European Activities
Japanese Activities
Mutual Interests of the Green Plastics Industry and Composting
PLA Problems in Composting Facilities
An Interesting/Baffling Set of Definitions
A Recent Development
Third-Party Certification Program

CHAPTER 7 PATENTS RELATED TO BIODEGRADABLE POLYMERS

Using Biodegradable Polymers to Inhibit Scale Formation in Oil Wells
Global Green Products Llc (Dover, De) - No. 9,382,466 (July 5, 2016)
Manufacturing Method of an Eco-Friendly Foaming Package Material
Tri Can Co. Ltd. (Hsinchu Hsien, Taiwan) - No. 9,056,423 (June 16, 2015)
Biodegradable Polymers for Use with Implantable Medical Devices
Advanced Cardiovascular Systems Inc. (Santa Clara, Calif.) - No. 7,875,283 (January 25, 2011)
Biaxially Oriented Polylactic Acid Film with High Barrier
Toray Plastics (America) (North Kingston, R.I.) - No. 7,951,438 (May 31, 2011)
Use of Selection Pressures to Enable Microbial Biosynthesis of Polyhydroxyalkanoates from Anaerobic Degradation Products
Leland Stanford Junior University (Palo Alto, Calif.) - No. 8,030,021 (October 4, 2011)

Polylactic Acid Composition

Teijin Limited (Osaka, Japan) - No. 8,030,382 (October 4, 2011)

Cheil Industries Inc. (Gum-Si, Korea) - No. 8,232,343 (July 31, 2012)

Medical Articles Containing Biodegradable Polymers and Acid-Neutralizing Cationic Species

Boston Scientific Scimed Inc. (Maple Grove, Minn.) - No. 8,263,103 (September 11, 2012)

Polylactic Shrink Films and Methods of Casting Same

Plastics Suppliers Inc. (Columbus, Ohio) - No. 8,263,197 (September 11, 2012)

Polylactic Acid Fiber

Kimberly Clark Worldwide Inc. (Neenah, Wis.) - 8,268,738 (September 18, 2012)

Method of Manufacture of Polylactic Acid Foams

Biopolymer Network Ltd. (Canterbury, New Zealand) - No. 8,283,389 (October 9, 2012)

Polylactic Acid Resin Composition

Adeka Corp. (Tokyo, Japan) - No. 8,293,824 (October 23, 2012)

Polylactic Acid and Manufacturing Process Thereof

Teijin Limited (Osaka, Japan) - No. 8,304,490 (November 6, 2012)

Process for the Modification of Biodegradable Polymers

Akzo Nobel N.V. (Arnhem, the Netherlands) - No. 8,334,348 (December 12, 2012)

Biodegradable Polymer and Compounds

Technofilm STA. (Sant'elpidio A Mare, Italy) - No. 8,349,914 (January 8, 2013)

Process for Extracting and Recovering Polyhydroxyalkanoates (PHAS) From Cellular Biomass

PHA Industrial (Serrana-Sp, Brazil) - No. 8,357,508 (January 22, 2013)

Compatibilized Polypropylene and PLA Blends and Methods of Making and Using Same

Fina Technology Inc. (Houston, Tex.) - No. 8,362,145 (January 29, 2013)

Polylactic Acid Composition and Molding Comprising the Composition

Tohcello Co., Ltd (Tokyo, Japan) - No. 8,362,157 (January 29, 2013)

Hyundai Motor Company (Seoul, Korea) - No. 8,378,027 (February 19, 2013)

Toray Industries Inc. (Japan) - No. 8,431,212 (April 30, 2013)

CHAPTER 8 MARKET OVERVIEW

Overview

Market Dynamics

Drivers

Shift in Consumer Preference from Conventional Packaging to Eco-Friendly Packaging Materials

Favorable Government Policies Towards Green, Ecofriendly and Biodegradable

Products

Technological Emergence along with the Development of New Bio-Based and Renewable Raw Materials

Restraints

Strong Market Competition from Conventional Petroleum Based Polymers in Different Applications

Product Performance and Durability

Opportunities

Growing End-Use Application Across the Regions

Implementation of Government Norms and Policies on Uses of Conventional Packaging Materials

CHAPTER 9 MARKET BREAKDOWN BY CHEMICAL TYPE

Overview

Background

Market Size Estimation and Forecast

Polylactic Acid (PLA)

The Process

Background

Technology Overview

Grades

Properties

Producers

Modifications

Issues with PLA

Use of Blends

Applications

Biodegradability

Market Size Estimation and Forecast

Polyhydroxyalkanoates (PHAS)

Background

Chemistry

Technology Details

Applications

Process

Properties

Biodegradability

Compostability

Recycling
Certification and Testing
Other Important Biodegradable Polyesters
Polycaprolactone (PCL)
PBS-Type Polyesters
Polyvinyl Alcohol (PVOH)
Polyvinyl Alcohol-Based Materials
Market Size Estimation and Forecast
Starch-Based Biodegradable Polymers
Agro-Polymers
Sustainable/Biodegradable Corn Starch Products
Background
Technical Details
Thermoplastic Starch
Mixtures of Starch and Biodegradable Polymers
Background
Producers
Application of Thermoplastic Starch Polymers
Environmental Issues
Starch-Filled Polymer Composites
Market Size Estimation and Forecast
Other Type of Biodegradable Polymers
Protein-Based Plastics
Biodegradable Polymers from Soybeans
Genetically Modified (GM) Biodegradable Polymers
Oxo-Biodegradable Plastics

CHAPTER 10 MARKET BREAKDOWN BY APPLICATION

Overview
Market Size Estimation & Forecast
Packaging
Background
Choice of Resin is the First Step in Sustainable Packaging
Issues
Targeted Applications
Sheet Extrusion Applications
Clear Rigid Packaging
Stretch Blow Molding Packaging

Food Packaging
Thermoformed Packaging
Cups and Utensils
New Bottle Development in Biodegradable Polymer Packaging
Impact of Food Service Industry
Foam Packaging
Loose-Fill Packaging
Market Size Estimation and Forecast
Fibers/Fabrics
Overview
Nonwovens
Biodegradable Drug-Loaded Fibers
Market Size Estimation and Forecast
Agriculture
Overview
Positive Aspects Cited by Proponents of Biodegradable Film Usage in Agriculture
A Recent Update on Biodegradable Mulches for Agricultural Applications
Production of Biodegradable Plastic Mulches
Market Size Estimation and Forecast
Medical
Overview
Background
Properties Required
Breadth of Applications
Criteria for Polymer Selection
Orthopedic Fixation Devices
Details on the Types of Biodegradable Polymers Used in Medical Field
Packaging and Sterilization Implications
Degradation of Medical Plastics
Commercial Biodegradable Medical Devices
Market Size Estimation and Forecast
Food Service
Overview
Examples of Biodegradable Commercial Products for Paper Coating Applications
Biodegradable Polymer Coated Paper and Paperboard
Paper Cups
Market Size Estimation and Forecast
Electrical and Electronics
Overview

Current Status of Electronics Applications
Biodegradable Electronics Research
Market Size Estimation and Forecast
Automotive
Overview
CAFE Issues
Current Status of Auto Applications
PLA Properties and Products
Market Size Estimation and Forecast
Others
Overview

CHAPTER 11 MARKET BREAKDOWN BY REGION

Overview
Europe
Europe Biodegradable Polymers Market Overview
Annual GDP Growth, European Union VS. World, 2005-2016
Market Size Estimation and Forecast
North America
North America Biodegradable Polymers Market Overview
Annual GDP Growth, North America, 2005-2016
Market Size Estimation and Forecast
Asia-Pacific
Asia-Pacific Biodegradable Polymers Market Overview
GDP Growth, China VS. India VS. World, 2005-2016
Market Size Estimation and Forecast
South America
South America Biodegradable Polymers Market Overview
GDP Growth, Brazil, VS. Chile VS. World, 2005-2016
Market Size Estimation and Forecast
Middle East and Africa
Middle East and Africa Biodegradable Polymers Market Overview
GDP Growth, South Africa VS. Saudi Arabia VS. World, 2005-2016
Market Size Estimation and Forecast

CHAPTER 12 COMPETITIVE LANDSCAPE

Industry Structure and Overview

Key Drivers of the Global Biodegradable Polymers Market:

Global Biodegradable Polymer Producers

Production Capacity Analysis of PLA

Production Capacity Analysis of PHA

List of Recent Developments in the Biodegradable Polymers Market

Porter's Five Forces Analysis

Bargaining Powers of Buyers

Bargaining Power of Suppliers

Threat of New Entrants

Threat from Substitutes

Intensity of Competitive Rivalry
