### Report Scope:

This research report provides a comprehensive analysis of endoscopy devices. These devices require U.S. Food and Drug Administration (FDA) Pre-market Notification (PMN) approval, EU Medical Device Directive European Conformity (CE Mark) approval or similar approvals in other countries. Regulation of endoscopic devices is rigid in terms of proving proof of product safety and efficacy before sale to the medical community.

Market figures are based on revenues at the manufacturer level. The market size considered in this report includes the sales of new endoscopy device systems comprising visualization and documentation systems, mechanical endoscopy systems and accessories. Trends were assessed using several parameters, including projected sales for existing products, new products, expanded indications for existing products, and, finally, projected changes in the prevalence, diagnosis, and scripting rates for certain diseases.

The report also analyzes current and potential opportunities for endoscopy device development and provides an overview of the endoscopy market by product type and region. The worldwide market is analyzed, and data provided for each disease subsegment.

The report analyzes the leading and emerging companies. Profiles of the manufacturers of the leading products are included, their specific product strategies are analyzed, and their product pipelines are discussed. This report looks at the coming new products and discusses how they may affect the competitive landscape, with a focus on how emerging products and technologies are influencing the current standard of patient care. Key players profiled in the report include Stryker Corp., Ethicon Endo-Surgery

Inc., Olympus Corp., Medtronic plc, Boston Scientific, Pentax Medical, Olympus Corporation, Stryker, Conmed Corp., Fujifilm Corp. and Cook Medical Inc.
