### Report Scope:

The scope of this report is focused on the North American as well as the global market for hydraulic fracturing flowback and produced water treatment equipment. The market is broken down by several different parameters, including country, equipment type and hydrocarbon resource. The report includes detailed analyses of key trends and opportunities, helping in the growth of the market. It will also analyze the major challenges faced by industrialists in the flowback/produced water treatment industry.

There are a number of expenses related to upstream oil and gas wastewater management, including expenditures for services and equipment for downhole water minimization, for lifting water to the surface, for treatment, for reinjection and for hauling and off-site disposal. This report will evaluate only oil and gas sector purchases for treatment equipment.

The report will also have a separate section highlighting the impact of COVID-19 on the global fracking water treatment market. The section will include COVID-19's impact on demand and supply of water treatment technologies to the oil and gas industry, price impacts and various strategic decisions taken by governments to boost the market.

The market size and estimations are provided in terms of value (\$ million), considering 2020 as a base year and market forecasts from 2021 to 2026. Global and regional level market size, with respect to equipment type and hydrocarbon resource, will also be provided. The impact of COVID-19 is considered while estimating the market size.
