Report Scope:

The report provides an overview of the global market for biochar and analyzes various market trends. The base year considered for analysis is 2022, while the market estimates and forecasts are given from 2023 to 2028. The market estimates are provided in terms of revenue, USD millions. Revenue forecasts for this period are segmented based on technology, application, region, and country.

Technologies looked at in the report are segmented into pyrolysis, gasification and others. Applications are agriculture, which contains both animal feed and soil amendment, and others. The others category of applications includes oil & gas, building and construction, water filtration and textiles.

Research shows that a significant part of the market is still unorganized in nature, including unincorporated private enterprises owned by individuals or households. The trend of relying on do-it-yourself (DIY) techniques was found to be quite popular on small-scale farms. Thus, the study focuses on the organized section of the market.

The market size only entails revenue generated from annual sales of biochar; it excludes the cost of services, as well as equipment.
