REPORT SCOPE:

This report examines the market for MF membrane products as reflected by the major applications of the technology: food and beverage processing, biopharmaceuticals manufacture, potable water production, wastewater treatment, industrial processes, and semiconductor fabrication. Five-year projections are provided for market activity and value. Industry structure, membrane applications and trends, pricing considerations, research and development (R&D), government regulations, company profiles, and competitive technologies are covered by the study.

The report is a study of the global market as applied to liquid separations. Analysis will not include membranes in the MF pore size range for air and/or gas separations or membranes for non-separating applications such as technical textiles or diagnostic kits. Medical devices based on MF membranes will not be addressed either. Values are given in U.S. dollars; forecasts are made in constant U.S. dollars, and growth rates are compounded. Sales of membranes refer to the sale of membranes packaged as modules, capsules, cartridges, cassettes, or other devices in which the membranes are housed. Pressure vessels, housings, pumps, piping, controls, or other system components are not included in the market values.

REPORT INCLUDES:
