REPORT SCOPE:

The current report offers a detailed analysis of the optical coherence tomography market. The study includes a discussion of OCT products used for medical and non-medical applications.

The report highlights the current market and future market potential of optical coherence tomography, and provides a detailed analysis of the competitive environment, regulatory scenario, patent analysis, drivers and restraints in the market. The report also covers market projections through 2023, as well as key players in the global OCT market.

The report details market shares of optical coherence tomography based on product, application and geography. Based on product, the market is segmented into traditional OCT/time domain (TD-OCT), frequency domain OCT (FD-OCT) and other OCT products. The frequency domain OCT (FD-OCT) is sub-segmented into Fourier domain or spectral domain (SD-OCT) and time-encoded frequency domain or Swept-Source (TEFD-OCT/SS-OCT). The other OCT product segment includes polarization sensitive OCT (PS-OCT), full-field optical coherence tomography (FF-OCT) and optical delay line.

Based on application, the market is segmented into ophthalmology, cardiology, oncology and other applications. The other applications segment includes other medical and non-medical application areas of OCT technology.

The market is segmented by geography into the following regions: North America, Europe and the Rest of the World. For market estimates, data is provided for 2017 as

the base year, with forecasts for 2018 through 2023. Estimated values are based on manufacturers' total revenues. Projected and forecasted revenue values are in constant U.S. dollars, unadjusted for inflation.
