Report Scope:

This report examines the nanotechnology industry. Definitive and detailed estimates and forecasts of the global market are provided, followed by a detailed analysis of the nanosensors, nanodevices, nanomaterials, end users and regions. The market size includes the markets of both nanotech products and nanomaterials, as well as tools. It also focuses on the regulations and government-supported programs impacting this market. Regionally, the focus of the study will be the markets of North America, Europe, Asia-Pacific and the Rest of the World (RoW).

This report focuses on the global market for nanotechnology by type (i.e., nanosensors, nanodevices nanomaterials, nanotools, nanoclays, nanomagnetics, nanoceramic products), by end user (i.e., electronics and semiconductors, healthcare and pharmaceuticals, energy, military and defense, transportation, industrial, others). Nanotechnology deals with the nanoscale, so it doesn't typically involve the manipulation of larger structures or objects that are not within the nanometer size range. There is overlap between nanotechnology and biotechnology, but genetic engineering and biological studies that don't specifically involve nanoscale manipulation are generally separate fields.

The scope of the nanotechnology industry is continually expanding as new discoveries are made and as researchers and industries explore innovative ways to harness the unique properties of nanoscale materials and devices. This report, however, concentrates on nanotechnologies that are currently in commercial use or are likely to be commercialized by 2028. Other applications that, while promising, are not likely to make it out of the laboratory by 2028 are not covered in depth. Sales value estimates are based on prices in the supply chain. Market-driving forces and industry structure are examined. International aspects are analyzed for all global regions.
