Abstracts

The global market for sleep software was valued at \$1.1 billion in 2025 and is projected to reach \$1.8 billion by the end of 2030, at a compound annual growth rate (CAGR) of 11.4% during the forecast period of 2025 to 2030.

Sleep software helps clinicians and researchers understand, diagnose and manage sleep disorders. These digital platforms collect, analyze and interpret data from various sleep studies, including polysomnography (PSG), home sleep tests and wearable devices. By transforming raw physiological signals, such as brain activity, breathing patterns, oxygen levels and heart rate, into meaningful insights, sleep software improves the accuracy and efficiency of sleep assessments.

Leading providers of sleep software include Calm, ResMed, Koninklijke Philips N.V., Inspire Medical Systems Inc., and Fisher & Paykel Healthcare Limited. The market is competitive, demanding software upgrades and continuous feature innovation to ensure user engagement, clinical reliability and sustained profitability. Report Scope
