## **Abstracts**

### **Report Scope:**

The market for most inkjet printing technologies is anticipated to grow at a healthy rate in Asia-Pacific through 2028. Inkjet printers are a basic type of consumer printer; the technology works by finely distributing ionized ink droplets on a sheet of paper. When the paper is fed through the printer, the ionized ink drops are directed in the path of the ink by magnetic plates. It provides a resolution of 300 to 350 dots per inch. Scan and single-pass printing are two types of inkjet printing systems. This report is primarily focused on the inkjet printing technology market and its uses by various end-use industries in the Asia-Pacific region. This report on the inkjet printing technology market highlights strong demand for inkjet printing products in countries such as China, India, Japan, and others. BCC Research analyzed key categories and regions to determine the status of the present and future inkjet printing technology market and forecasted market growth from 2022 to 2028.
