## Abstracts

### Report Scope:

The report discusses the two source types of lithium mining, such as brine and hard rock. It analyzes the leading players in the market as well as market trends. Emerging technologies and trends are reviewed. Because this is a global study, BCC Research analyzed domestic and international technological issues and economic considerations.

The market segments of the report are focused on the technical and commercial aspects of lithium mining activities with respect to two product types: lithium carbonate and lithium hydroxide. The report also covers the policy and regulatory framework for lithium mining that mining companies adhere to in order to maintain environmental sustainability and to comply with government regulations.

The report analyzes the global market by region as well as country, with forecasts from 2023 through 2028. The report surveys the competitive landscape of the lithium mining industry, and profiles key market players.

The currency used in this report is U.S. dollars, with market size indicated only in millions of U.S. dollars. The revenues of the companies are derived from their annual reports. For all the companies, the revenues are given in the U.S. dollars; and for companies that report their revenue in other currencies (i.e., euros and pounds), the average annual currency conversion rate has been used for the particular year to convert these values into U.S. dollars. The conversion rate for each currency conversion is provided in the report.
