## Abstracts

### Report Scope:

This report covers different types of power tool categories, such as drilling tools, fastening tools, cutting tools, grinding tools and others. It also analyzes accessories such as batteries, chargers, bits, blades, etc. This report does not cover wearable clothes, jobsite radios and lights, power tool attachments (for example, stands and tables. It also does not cover combo kits of power tools because of the disparity in the standardization products between manufacturer's combo packs. Companies use different strategies to sell their products. Therefore, we have assumed that power tools are sold on a per unit basis.

This report covers different power-tool technologies tools such as cordless, pneumatic and gasoline-fueled, engine-operated tools. Electric type (cordless type) power tools have a sizeable customer base compared to that of pneumatic and gasoline-operated tools. Nonetheless, consumers from developing countries like India use corded-type tools because they are less expensive to use and have a high reselling price.

This report profiles major companies, their key developments, their competition landscape and others. The impact of COVID-19 also is covered in this report.

All market values are in \$ million and these values are considered as nominal values; 2019 is considered as the base year, 2020 as the projected year and the values forecasted from 2021 to 2025. The market values are forecasted based on different associated industry factors such as construction industry growth, per capita income, technology development, power tool adoption rate and others.
