### REPORT SCOPE:

The scope of the report includes, a general outlook of sustainable biopolymers, which are bio-based polymers and biodegradable polymers. This is a compendium report and most of the information is sourced from existing reports by BCC Research published during 2017 to 2019 on the related topics. It also examines industry standards, government and industry support, and other key factors related to the success of sustainable biopolymers. This report segments the market into two major sub-segments like sustainable biopolymers product type and sustainable biopolymers applications.

The product type segment explains the prevalent and upcoming types covering the qualitative aspects of the market in brief. Detailed overview of these types along with relevant market data on market size measured in value and volume terms are provided. The application chapter include detailed overview of applications like flexible green packaging, rigid packaging, polymeric foams, high-performance films, and others. The scope is limited to the recent studies published by BCC Research and is thus not exhaustive.

The scope of the report covers the overview of the global market for sustainable biopolymers and analyses of the global market trends, with data from 2017, considering it as base year, estimates for 2018 and forecast for 2023 with projection of CAGR during the forecast period. The sales values are presented in US dollars, while volumes are presented in kilotons units. Estimated values used are based on manufacturers' total revenues. Projected and forecasted revenue values are in constant US dollars, unadjusted for inflation.
