Report Scope

A water heater is a device that heats water for domestic and commercial uses. It operates by converting energy from a source such as electricity, gas or solar power into thermal energy, which heats the water. This heated water is then stored in a tank or heated on demand in instant heaters and made available for use. Water heaters find extensive applications in both residential and commercial settings. In homes, they provide hot water for bathing, cleaning dishes, laundry and other household chores. Additionally, they are essential for cooking, especially in areas where gas stoves are not prevalent. Commercial applications such as hospitals, hotels, restaurants and laundries rely on water heaters for various processes, including cleaning equipment, sterilizing tools, and heating materials.

This report gives an overview of the global market for water heaters and examines market trends. It includes 2023 as the base year and forecast data from 2024 to the end of 2029. The report analyzes the global market revenue (\$ million) in terms of segments (product type, storage capacity, energy source and applications) and regions (North America, Europe, Asia-Pacific and the Rest of the World).

The report also examines key trends and challenges affecting the market and the companies operating within it. It analyzes environmental, social and corporate governance (ESG) developments, patents and emerging technologies in the water heater market. It also surveys the competition among major players and provides profiles of the market's leading companies.
