## Abstracts

For the last 10 years, Airbus and Boeing have sold and built planes at a record pace. Will this continue into the next decade, or is there change in the air?

Are Airbus and Boeing positioned to handle an increase in commercial aircraft, which analysts say will be necessary to satisfy future demand?

Will Airbus and Boeing continue to reign as leaders in the air, or will increased competition from other aircraft manufacturers chip away at this empire?

Which regions or countries are most likely to profit from increased demand? How will this affect the connector suppliers supporting the civil aviation market?

What peripheral markets are driven by the civil aviation market? How will technology changes, such as increased computerization, robots, and outsourcing, affect this industry?

What connector types are poised to show significant growth as the industry expands? What connectors will be used in additional passenger conveniences? Or used in applications to decrease fuel consumption? And, what connections will be needed as drones and spacecraft are commercialized?

The aviation industry is comprised of commercial and general aviation, as well as commercial spacecraft, drones, and training equipment. The civil aviation market has expanded greatly over the last decade, but what does the future hold? Will this expansion continue, and at what pace and cost? This report analyzes these topics and other decisive trends relevant to the growth and stability of this market sector. The report looks at the past, present, and future of the civil aviation market, and provides

valuable insight to companies whose products or services are utilized now, or will be used in the future, in this dynamic market.
