The Europe intelligent transportation systems (ITS) market is projected to reach \$14.62 billion by 2033 from \$7.90 billion in 2024, growing at a CAGR of 7.08% during the forecast period 2024-2033. Road safety, public transport operations, freight logistics, and traffic management are the main applications that make up the European ITS market, with traffic management leading the way. EU and national investments in smart-city initiatives, cross-border C-ITS corridors, and autonomous vehicle pilot programs are what propel Europe's leadership in ITS adoption. Modern AI-powered traffic management, extensive IoT connection, and 5G-capable V2X solutions are all contributing to the rapid expansion of ITS deployment throughout the urban mobility networks in the region.

### Market Introduction

The market for Intelligent Transport Systems (ITS) in Europe is developing quickly and is becoming a key component of the region's smart-mobility strategy. Using advanced sensing, communications, and analytics, ITS solutions turn legacy infrastructure into data-driven, interconnected networks, encompassing applications like adaptive traffic management, road-user safety systems, public transportation coordination, and freight-logistics optimisation. In order to reduce traffic, cut emissions, and improve network

resilience, European cities are using Intelligent Transportation Systems (ITS) for anything from dynamic signal control in large cities to real-time passenger information on tram and bus lines.
