## Global Agriculture Technology as a Service Market Forecast, 2019-2024

The Global Agriculture Technology-as-a-Service Industry Analysis by BIS Research projects the market to grow at a significant CAGR of 21.75% during the forecast period from 2019 to 2024. High growth in the market is expected to be driven by the growing need to adopt agriculture technologies across the industry, conversion of capital expenditure into operational expenditure for customers, and greater customer retention for service providers. The added benefits of lower costs, scalability, integration, and accessibility associated with ATaaS are also expected to be responsible for the reported growth of the business model.

Agriculture is the source of livelihood and sustenance of economy in several regions of

the world. Hence, the need to adopt advanced technologies in the agriculture industry has driven favorable initiatives, policies, and support shown by governments in countries such as the U.S., Canada, the U.K., Germany, France, Australia, India, and China. In emerging countries, the growth of the market is expected to be driven by rising awareness among governments and manufacturers-turned-service providers about the need to elevate farm produce, while evaluating the farm expenditure of their growers. Furthermore, rising concerns over global food security and sustainability have led to extensive investments by the governments across the world.

### Expert Quote

“ATaaS business model allows the customers to procure their desired agriculture technologies as services under different affordable pricing models rather than acquiring them as a one-time purchase. By relieving the customers of ownership of agriculture technologies through the service model, the entire responsibility of ownership of assets relies on the service providers, leading to a higher cost of operations for them. Despite these additional costs, by adopting the Agriculture Technology-as-a-Service model, service providers are expected to experience better customer retention and recurring revenue, owing to the direct contact with their customers for constant feedback.”
