Global Camouflage Coatings Market Forecast

The Global Camouflage Coatings Market analyzed by BIS Research is expected to show high growth in the coming years.

Coatings are essentially applied for protection, preservation, and beautification of the products. They also aid in obtaining durability and additional customized features such as corrosion resistance, wear and tear resistance, and fouling resistance. As a result, the products offered by the industry have undergone a gradual shift from their traditional usage of providing finishes and aesthetic feel to being used for processes of surface treatment, thereby adding value to another product.

Currently, the advent of smart coatings has disrupted the market, and a high demand for the military coatings has been witnessed. The modern aircraft and the military system majorly focus on finding strategies and innovative technologies with the help of which the radar systems and the infrared sensors could be evaded. The advanced defense networks are now focusing on ways by which visual detection can be avoided. Camouflage coatings attempt to address this issue and therefore, the government and the defense agencies have been investing in camouflage technologies recently.
