Expert Quote

“The clinical decision support systems of the future are expected to be developed to leverage data to make observations which are not interpretable by humans. Healthcare IT systems in the future are expected to leverage cutting-edge technology as an enabler to make clinical care more streamlined and accurate. The technology is still in its nascent stage. One of the strong points of this technology is that it improves with time. Continuous input from clinicians, patients, and other stakeholders will be essential for correctly implementing the technology to enhance meaningful uses, reduce costs, and improve treatment outcomes.”
