The drone camera market has exhibited a robust growth rate in the recent past. Cameras used in drones have experienced continuous technological advancement since their inception. Their increased adoption across commercial, military and homeland security end-users is attributed to their declining prices, compact size and ease of operability. Furthermore, increase in demand of drones for imaging applications, rise in usage of low cost Do-It-Yourself (DIY) drones, and high demand of drones for surveillance applications are driving the growth in the drone camera market. The demand of drone cameras has experienced a significant rise in the recent years and the trend is anticipated to continue in the next few years, owing to their cost saving advantage across commercial and non-commercial end-users. The rise in demand of drones across emerging nations and miniaturization of cameras are expected to open several new opportunities for the drone camera market in the years to come.

The major type of drone cameras include SD camera and HD camera. The major applications of drone cameras are photography and videography, thermal imaging and surveillance. These drone cameras are used across commercial, military and homeland security end-users.
