The electrosurgical devices industry is a multi-billion-dollar market which consists of multitudinous companies involved in the manufacturing of generators and instruments as well as electrosurgical accessories to bolster the increasing demand for electrosurgical devices.

Electrosurgical devices include electrosurgical generators, monopolar and bipolar devices, and electrosurgical accessories to improve the overall minimally invasive surgical process efficiency (e.g., coagulation, desiccation, fulguration and incision, among others). Currently, electrosurgical devices are essential solutions for the medical devices companies that are facing increasing level of demand for high productivity and cost reduction. The recent advances in electrosurgery has revolutionized the field of surgery. Currently, several minimally invasive surgeries, such as laparoscopy, thoracoscopy, endoscopy, coronary bypass surgery, surgery of face, endoscopic brow, and face lift, among others have been performed using electrosurgical devices. Limited blood loss, minimized post-operative recovery time, and improved efficiency of surgical procedures are the most prominent factors facilitating the growth of incorporation of electrosurgical devices in the surgical industry. Furthermore, the advent of technologies, such as vessel sealing technology, tissue response technology, active electrode monitoring systems, and argon gas enhanced technology, has enabled the companies in the medical devices industry to meet the regulatory compliance as well as manage their profit margins and remain competitive in the market.
