The pharmaceutical industry is focused on the most emerging branch in pharmaceutical sciences known as “Pharmaceutical nanotechnology”. The increasing prevalence of chronic diseases/disorder and development of the healthcare infrastructure are promoting the adoption of the novel medicine known as nanomedicine for better efficacy and improved patient outcome.

Nanomedicine works on same principle of nanotechnology, as the materials at nanoscale level possess unique characteristics as compared to macroscopic level. Nanomedicine has a multidisciplinary nature involving notions and techniques from biology, chemistry, and physics. Nanotechnology provides exceptional benefits when applied to medical devices and pharmaceuticals. Furthermore, the patent cliff/expiration has enabled the pharmaceutical companies to adopt new business strategies. Many blockbuster drugs are going off-patent but the introduction of nanotechnology in medicines has revolutionized the pharmaceutical industry. With the advancement in the Nano pharmaceutical industry, the number of patent filings has dramatically increased. Pharmaceutical companies have developed new strategies & techniques to re-patent drugs which are on the way to expiration by modifying them with the help of nanotechnology. Nanodrugs offers a promising potential in terms of revenue growth.
