This report will be delivered in 3-5 working days.

Radiotherapy is the treatment of diseases such as cancer and tumor while using x-rays or similar form of radiation. The market's expansion is driven by factors such as increasing incidence of cancer, continuous technological advancements such as the development of MRI linear accelerators, proton therapy, and the introduction of treatment planning software that integrates with imaging data. These innovations collectively contribute to improved cancer treatment outcomes.

Further, the global expansion of radiotherapy services is bolstered by growing collaborations and partnerships among industry players, cancer treatment centers, and oncology research institutes, further contributing to market growth. Despite these positive trends, challenges such as the high costs associated with obtaining and implementing radiotherapy devices, particularly in emerging countries with insufficient funds and healthcare infrastructure, may limit the adoption of new radiotherapy technologies.
