Market Overview

The global single-use/disposable endoscopy market is witnessing a significant increase in size of the market due to the ongoing COVID-19 pandemic. The overall market was

estimated to be \$471.7 million in FY2019, and it is expected to grow at a CAGR of 44.03% during the forecast period, 2021-2030.

Owing to the COVID-19 pandemic, the secondary procedures including endoscopy services were shut down in 2020. However, the pandemic has created a positive impact on the net revenue in single-use endoscopes primarily due to the increase in infectious diseases and increasing awareness among patients regarding concern about hygiene has led to increase in demand of single-use endoscopes.

Our healthcare experts are continuously analyzing the impact of industrial and regulatory decisions on the global single-use/disposable endoscopy market. The market is driven by certain factors such as the rising incidences of hospital acquired infections, high cost associated with reusable endoscopes, increasing infectious diseases and growing regulatory approvals in the single-use/disposable market.

The market is favored by the rising incidences of hospital-acquired infections (HAIs), growing regulatory approvals, and the lower cost associated with disposable endoscopes.

Within the research report, the market is segmented based on product type, patient age, end-user, and regional analysis. Each of these segments covers the market's snapshot over the projected years, the inclination of the market revenue, underlying patterns, and trends by using analytics on the primary and secondary data obtained.
