## Software-Defined Radio Market Forecast, 2019-2024

The Software-Defined Radio Industry Analysis by BIS Research projects the market to grow at a significant CAGR of 7.19% during the forecast period from 2019 to 2024. The North America region dominated the global software-defined radio market in 2018, whereas Asia-Pacific is expected to have the highest growth rate during the forecast period.

The global software-defined radio market has gained widespread importance in military operations due to increasing political conflicts, migrations issues, and extensive upgradation defense programs. Growing market for space-based software-defined radio and increasing demand for AI in software-defined radio for military operations are likely to increase opportunities for software-defined radio. However, difficulties in maintenance of software-defined radio and subsystems and interoperability issues are expected to hamper the overall growth of the software-defined radio market.

### Expert Quote

“Asia-Pacific (APAC) software-defined radio market is expected to witness the fastest growth throughout the forecast period. The increase in the demand for software-defined radio in Asia-Pacific is due to the rising border tensions between the neighboring countries, increase in defense spending, and rise in the terrorist movements. According to the analysis, China, Japan, South Korea, and India are majorly contributing to the growth of the market in the Asia-Pacific region. Europe and Asia-Pacific are the prominent regions for the development of software-defined radio market. Moreover, owing to a smaller number of manufacturing companies in the Asia-Pacific region, there is a vast scope of opportunities for both new and already established market players.

The U.K., France, Germany, Russia, and Italy are some of the prominent countries for the European software-defined radio market. The European market is likely to foresee growth opportunities during the forecast period. The high demand for software-defined radios is owing to the developments in the artificial intelligence for military operations to develop cognitive radios. In Middle East, Israel is a prominent country involved in the development of advanced software-defined radio.”
