Sports play an important part in the development of an individual and society. Sports is a physical activity which inculcates discipline, activeness, fitness, and team spirit among people. Playing sports is a common physical activity taken up by health-conscious individuals globally. Not only professional athletes, but children as well as adults play sports. The physical activity involved while playing sports may lead to injuries among the players. Sports medicine is a branch of healthcare that deals with the prevention and treatment of sports injuries and the overall physical fitness of active sportspersons, affecting their functioning and performances, hence, sports medicine is specifically important for them. The treatment of injuries may involve the use of medical devices and pharmaceuticals. These medical devices include implants, arthroscopy devices, suture anchors, braces and support and many other accessories. With the rising awareness about sports and fitness, there has been an increased participation in sports even by the non-professional sportsperson and hence there is an increase in the need for the development of novel diagnostics, prevention techniques and treatment methods which are aimed specifically at sports injuries. The market has witnessed significant advancements in the past few years through the intervention of high-end technologies and medical devices. These advanced treatment methods have reduced time for the recovery.

The sports medicine market consists of various products that can be classified as reconstruction and repair, support and recovery products and accessories.
