Hard copy option is available on any of the options above at an additional charge of \$500. Please email us at [order@marketpublishers.com](mailto:order@marketpublishers.com) with your request.

The four modes of transport which have been extensively developed and used for passenger and freight transport since the advent of 20th century includes roadways, railways, airways, and seaways. However, with the ever-increasing travelling population and growing requirement for efficient mode of transportation system which can reduce travel time between cities, Elon Musk suggested a fifth mode of transport “Hyperloop” in 2013 which provides advantages such as quick transport of passengers and freight from origin to destination on-demand. Some of the important criteria which influence the superfast transport system are socio-economic condition, commuter lifestyle, acceptance of technology, demographic conditions, infrastructure availability, and global economic conditions.

As the transportation industry is experiencing higher pressure due to the exponential growth in travelling population, it has led to drastic changes in the transport infrastructure causing emergence of transportation technologies such as hyperloop, autonomous vehicles, and air taxis among others to make public transport more economical and efficient. As, superfast transport system is the futuristic form of modern transportation, it is expected to have a complex ecosystem of raw material suppliers, technology providers, design & construction firms, government agencies and service providers working together to create a more sustainable transport solution. Since the market is currently at a very nascent stage, it lacks proper understanding and regulatory mandates which is expected to slow its adoption rate. With the formation of consortia or association, the pace of innovation is expected to increase, facilitating convenient

knowledge transfer among technology providers, and rise in collaboration of governmental agencies and regulatory authorities to lay down guidelines and legal framework.

The report addresses the following questions in the context of superfast transport system market:

What is superfast transport system market?

What is the market structure for superfast transport system in optimistic, pessimistic and neutral scenario?

What are the major factors impacting the market positively and negatively during 2020, 2024 and 2028?

What is the potential ecosystem for the superfast transport system?

What are the key projects and innovations in global superfast transport system market?

Which are key players in the superfast transport system market?

What is the forecast global market value for the period 2020, 2024 and 2028?

The market is expected to grow about 127 times from 2020 to 2024 and 14 times between 2024 and 2028 when optimistic view is considered. The growth of the market is expected to be attributed by the rising investment in countries such as China, India, the U.A.E. and the U.S., among others. The market for superfast transport system is mainly driven by advantages of superfast transport which can overpower the existing mode of transport such as railways, airways and personal vehicle or any other public means of transport. However, technical challenges such as maintaining low pressure vacuum inside the tube, development of pods which can accommodate passengers as well as cargo at high speed and safety concerns of passengers in case of technical failure while travelling are expected to hamper the overall growth of the superfast transport system market during the forecast period. Increased congestion and increased consumption of fuel across the globe is expected to create great opportunities for the superfast transport systems between 2020 and 2028 as they are expected to reduce congestions and are anticipated to be eco-friendlier as compared to other modes of transport.

## Contents

### EXECUTIVE SUMMARY

### 1 MEGATRENDS FOR SUPERFAST TRANSPORT

- 1.1 Megacities
- 1.2 Demographic Changes
- 1.3 Climate Change
- 1.4 Smart and Integrated Mobility
- 1.5 Technology
- 1.6 Energy & Resource

### 2 MARKET DYNAMICS

- 2.1 Market Drivers
  - 2.1.1 Advantages of Hyperloop Technology
  - 2.1.2 Rising Interest of Companies and Government Bodies
- 2.2 Market Opportunities
  - 2.2.1 Increasing Congestion in Global Transport and Increased Consumption of Energy Resources
- 2.3 Market Restraints
  - 2.3.1 Technical Challenges

### 3 COMPETITIVE INSIGHTS

- 3.1 Key Strategies and Developments
  - 3.1.1 Investments
  - 3.1.2 Partnerships, & Collaborations
  - 3.1.3 Product Development
  - 3.1.4 Business Expansion

### 4 INDUSTRY ANALYSIS

- 4.1 Government Initiatives
- 4.2 Consortiums and Associations
- 4.3 Ecosystem Analysis
  - 4.3.1 Raw Material Suppliers
  - 4.3.2 Technology Providers

4.3.3 Design & Construction Firms

4.3.4 Government Agencies

## **5 COMPONENTS IN SUPERFAST TRANSPORT SYSTEM**

5.1 Introduction

5.1.1 Tube

5.1.2 Pods

## **6 SUPERFAST TRANSPORT SYSTEM MARKET ANALYSIS AND FORECAST**

6.1 Assumptions and Limitations

6.2 Market Overview

6.3 Asia-Pacific

6.4 Europe

6.5 North America

6.5.1 Proposed Los Angeles to San Francisco Route

6.6 Rest-of-the-World

## **7 COMPANY PROFILES**

7.1 Overview

7.2 AECOM

7.2.1 Company Overview

7.2.2 Financials

7.2.2.1 Financial Summary

7.3 Arrivo

7.3.1 Company Overview

7.3.1.1 Corporate Summary

7.4 Dinclix GroundWorks Global Limited

7.4.1 Company Overview

7.4.1.1 Corporate Summary

7.5 Hyperloop One

7.5.1 Company Overview

7.5.1.1 Corporate Summary

7.6 Hyperloop Transport Technologies

7.6.1 Company Overview

7.6.1.1 Corporate Summary

7.7 Space Exploration Technologies Corp. (SpaceX)

- 7.7.1 Company Overview
  - 7.7.1.1 Corporate Summary
- 7.8 TransPod
  - 7.8.1 Company Overview
    - 7.8.1.1 Corporate Summary
- 7.9 Delft Hyperloop
  - 7.9.1 Company Overview
    - 7.9.1.1 Corporate Summary
- 7.10 EPFLoop
  - 7.10.1 Company Overview
    - 7.10.1.1 Corporate Summary
- 7.11 Hyperloop India
  - 7.11.1 Company Overview
    - 7.11.1.1 Corporate Summary
- 7.12 Paradigm Hyperloop
  - 7.12.1 Company Overview
    - 7.12.1.1 Corporate Summary
- 7.13 WARR
  - 7.13.1.1 Corporate Summary

## **8 REPORT SCOPE & METHODOLOGY**

- 8.1 Scope of the Report
- 8.2 Superfast Transport System Market Research Methodology

## List Of Tables

### LIST OF TABLES

Table 2.1 Comparison of Capital Costs by Transportation Mode

Table 2.2 Few Hyperloop Projects and Government Partnerships

Table 2.3 Peak Hours Spent in Congestion by Population in 2017

Table 3.1 Investments

Table 3.2 Partnerships & Collaborations

Table 3.3 Product Development

Table 3.4 Business Expansion

Table 4.1 Government Initiatives

Table 4.2 Examples of Some Associations and Consortia

Table 6.1 Global Market for Superfast Transport System (Neutral Scenario), 2020, 2024, and 2028

Table 6.2 Global Market for Superfast Transport System, (Optimistic Scenario) 2020, 2024, and 2028

Table 6.3 Global Market for Superfast Transport System (Pessimistic Scenario), 2020, 2024, and 2028

Table 6.4 Suggested Stations and Their Population

## List Of Figures

### LIST OF FIGURES

- Figure 1 Advantages of Superfast Transport System
- Figure 2 Superfast Transport System Market Snapshot, \$ Million, 2020, 2024, and 2028
