Abstracts

Asia Pacific Diathermy Equipment Market is valued at approximately USD 1.00 billion in 2023 and is anticipated to grow with a healthy growth rate of more than 11.51% over the forecast period 2024-2032. Diathermy Equipment is a class of medical devices used for therapeutic reasons, primarily in physiotherapy and rehabilitation. Diathermy uses high-frequency electromagnetic currents to generate heat within tissues, promoting numerous therapeutic effects such as pain alleviation, muscular relaxation, and increased circulation. Furthermore, growing awareness about non-invasive therapies among healthcare providers are gaining attention towards the Asia Pacific Diathermy Equipment Market. Non-invasive therapies can offer cost-effective solutions for both healthcare providers and patients by reducing the need for expensive surgeries, hospitalizations, and long-term medication use. Diathermy treatments can be performed in outpatient settings, leading to lower healthcare costs and improved resource allocation.

The Asia Pacific Diathermy Equipment Market is driven by increasing healthcare expenditure and the growing prevalence of chronic diseases across the region. Chronic diseases often manifest with pain as a common symptom. Chronic diseases, such as osteoporosis, arthritis, cardiovascular diseases, and diabetes, are increasingly common in the Pacific region due to various factors including aging populations, sedentary lifestyles, and changing dietary habits. Diathermy equipment, with its therapeutic

applications across a range of chronic conditions, can play a crucial role in managing symptoms and improving the quality of life for patients. Modern diathermy equipment offers precise control over parameters such as frequency, intensity, and duration of treatment, allowing healthcare providers to tailor therapy to individual patient requirements. However, high expense of diathermy equipment and a lack of operating knowledge is going to impede the overall demand for the market during the forecast period 2024-2032.

The key Countries considered for the Asia Pacific Diathermy Equipment market study includes China, India, Japan, South Korea, Australia, and Rest of Asia Pacific. In 2023, China was the largest regional market owing to the increasing geriatric population in the region. Older adults often prefer non-invasive or minimally invasive treatment options due to concerns about surgery-related risks and complications. Diathermy offers a non-invasive approach to pain relief and rehabilitation, making it particularly attractive for elderly individuals seeking alternative treatment modalities. According to the World Health Organization, China has one of the world's fastest-growing elderly populations. By 2040, China is expected to have 28% of its population over the age of 60. The market in India, on the other hand, is expected to develop at the fastest rate over the forecast period.
