Petrochemicals are referred to as chemical compounds derived from natural gas, coal, and crude oil. These compounds include organic molecules that are naphthenic, aromatic, and aliphatic. They are necessary for the manufacturing of many different products, including synthetic materials, polymers, and chemicals. These products are becoming increasingly popular in a variety of industries, including the packaging, electronics, building, and automotive sectors. The growing emphasis on circular economy is a key trend that is supporting the growth of the Asia Pacific Petrochemicals Market. Circular economy projects have prompted by a growing awareness of environmental sustainability.
