Abstracts

Critical Infrastructure Protection is valued approximately at USD 129 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 3.30% over the forecast period 2021-2027. Critical infrastructure protection is a security solution used for the protection of systems, assets and networks of the nation such as railways, nuclear plants and hydro plants from potential threats. These CIP systems are helpful for smooth running of nation in the time of any disaster. In recent years, the security breaches and cyber-crime have increased up to a huge extent which is propelling the market of CIP. Moreover, the sudden takeover of internet and interconnected networks

have increased the risk for leakage of important federal, Nation security and government data internet, therefore the need for CIP is increasing in this sector. For instance, According to the SITE intelligence group, the WHO data was leaked on April 19,2020, the breach of 25,000 email addresses and passwords along with information belonging to various groups such as the Gates Foundation, the National Institutes of Health. However, the high cost of implementation, technical complexities and lack of interoperability may hinder the market.

The regional analysis of the Critical Infrastructure Protection is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region across the world in terms of market share due to the growing implementation of CIP solutions and services across different end-user verticals in the region, The increasing involvement of the government, in order to protect the defense critical infrastructures, are expected to propel the market.
