Abstracts

Europe Systematic Review Management Software Market is valued approximately USD 84.08 million in 2023 and is anticipated to grow with a healthy growth rate of more than 5.74% over the forecast period 2024-2032. Systematic Review Management Software is a type of software designed to assist researchers in conducting systematic reviews efficiently and effectively. Systematic reviews are comprehensive, structured assessments of existing literature on a particular topic, aimed at synthesizing evidence to answer specific research questions. Furthermore, rising collaborative research networks are gaining attention towards Europe Systematic Review Management Software Market. Systematic review management software enables seamless collaboration and knowledge sharing among members of these networks, facilitating the conduct of large-scale systematic reviews and meta-analyses across multiple institutions and countries.

The Europe Systematic Review Management Software Market is driven by adoption of open science practices and rising integration of artificial intelligence and machine learning across the region. European research funding agencies and institutions are increasingly embracing open science practices, such as open access publishing, data sharing, and transparent research methodologies. Systematic review management software that supports open science principles, by providing tools for protocol registration, data sharing, and reproducible research, is in alignment with these trends and is favored by research organizations in the region. In addition, European researchers are exploring the potential of artificial intelligence (AI) and machine learning

(ML) technologies to enhance the efficiency and accuracy of systematic reviews. Systematic review management software vendors are incorporating AI and ML algorithms for tasks such as literature screening, data extraction, and risk of bias assessment, enabling researchers to automate repetitive tasks and extract insights from large datasets more effectively. However, the high development cost of systematic review management software and lack of expertise is going to impede the overall demand for the market during the forecast period 2024-2032.

The key countries considered for the Europe Systematic Review Management Software market study includes UK, Germany, France, Italy, Spain, and Rest of Europe. In 2023, Germany was the largest regional market owing to factors such as rising number of Small and Medium-sized Enterprises across the region. Regulated industries such as healthcare, pharmaceuticals, and biotechnology, SMEs are subject to strict regulatory requirements for product development, safety, and efficacy. Systematic review management software helps SMEs comply with regulatory standards by providing tools for systematic literature reviews, evidence synthesis, and documentation of research processes, ensuring transparency, reproducibility, and compliance with regulatory guidelines. Furthermore, the market in the UK, on the other hand, is expected to develop at the fastest rate over the forecast period.
