Global 3D Motion Capture System Market is valued approximately USD 134.10 million in 2019 and is anticipated to grow with a healthy growth rate of more than 12.10 % over the forecast period 2020-2027. 3D Motion Capture System is referred as a process of recording movements of people or objects. It is widely used in sports, medical, entertainment, military applications and for the validation of robotics and computer visions. Generation of realistic and complex physical movements, real time data availability and good quality animation in less time are anticipated to drive the growth of the market during the forecast period. In addition, the advent of 3D gaming consoles and increase in the usage of cloud-based platforms are the few factors responsible for growth of the market over the forecast period. Furthermore, the introduction of new products and other strategic alliance by the market players will create a lucrative demand for the market. For instance: as per the Max Planck Institute in June 2020, a team of scientists at the Max Planck Institute Systems in Germany has introduced a new algorithm model named VIBE that enables more accurate and detailed estimates of 3D human motion from video than was previously possible. Also, VIBE works on a large-scale motion capture database developed at the institute that can be used for visualization, animation and generating training data for deep learning. Such advancements would drive the growth of the market over the forecast period of 2020-2027. However, specific hardware and software required for data processing and

need for high-end processors are the major factors restraining the growth of global 3D Motion Capture System market during the forecast period.

The regional analysis of global 3D Motion Capture System market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share as the region is one of the most significant markets for 3D motion capture, due to the increasing adoption of advanced technologies in the entertainment, advertising, and medical industries. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
