Global 3D Printing Market is valued approximately USD 13.21 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 20.5 % over the forecast period 2021-2027. 3D printing is a computer-assisted technique for producing accelerated prototypes and usable end-use components. It converts virtual designs from CAD software into thin, virtual, horizontal layer-wise cross-sections before the model is finished. It is a product creation and distribution process that is more innovative, simpler, and agile. Additive manufacturing is transforming from a prototyping technique to a practical aspect of fabrication, thanks to rapid advances in material structure, such as the new use cases of polymers and metals. New fabrics, shorter lead times, and advanced finishes are allowing the technology to be incorporated into production processes while adhering to requirements (FDA, ASTM, and ISO). Various technical advances, such as artificial intelligence (AI) and machine learning (ML), are also boosting the adoption of 3D printing devices, as these innovations allow automated printing for more effective manufacturing. For instance, Additive Manufacturing

Technologies (AMT), headquartered in the United Kingdom, debuted the latest Digital Manufacturing Systems at Formnext 2019 in November 2019. It makes use of AMT's patented technologies to provide an integrated and digital approach for the entire production process. Governments all over the world have begun to invest in 3D printing research and development, which has aided in the spread and acceptance of the technology. The Dutch government, for example, invested an extra USD 150 million in 3D printing-related research and development. The market is expected to expand due to aggressive R&D in three-dimensional printing (3DP) and rising demand for prototyping applications from various industry verticals, especially healthcare, automotive, and aerospace and defence. However, high costs incurred on printing small and complex parts impede the growth of the market over the forecast period of 2021-2027. Although, rising need for customizations across different industry verticals presents a lucrative opportunity for the market.

The main regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are included in the geographical review of the global 3D Printing industry. Because of the widespread use of additive manufacturing in the region, North America is the world's leading region in terms of market share. Asia-Pacific, on the other hand, is expected to rise at the fastest pace between 2021 and 2027. One of the major drivers driving market growth in the area is the increasing demand for personalized services across industry verticals. Furthermore, strategic measures taken by national governments, especially in China and India, are assisting in the development of a sustainable additive manufacturing ecosystem, which will provide lucrative growth opportunities for the Asia-Pacific 3D Printing industry.
