Global 5G Chipset Market is valued approximately USD 1.4 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 49.2% over the forecast period 2020-2027. A 5G Chipset, also known as data flow management system, which is a type of electronic components used in manufacturing of integrated circuit. A 5G chipset is a vital element of 5G devices, such as 5G-enabled smartphone, laptops, routers, and telecom base stations. Since the chipset is involved in managing the information flow that passes via a computer for the proper functioning of the computer. This 5G chipset module allows the users of these devices to enjoy an enhanced experience, as well as provide a great access the next-generation networks. Increasing number of internet users across the globe, growing machine-to-machine/IoT connection, and increasing penetration of smartphone & laptops are the few factors responsible for

high CAGR of the market over the forecast period. For instance, according to the International Telecommunication Union (ITU), about 3.19 billion of internet users were recorded in 2015 which was increased to around 3.74 billion internet users in 2017. Similarly, as per the Statista, there were about 457.4 million number of internet users in India were recorded in 2017 that is projected to reach almost 666.4 million number of users by 2023. This, in turn, is expected to augment the adoption & utility for 5G chipsets all over the world. Moreover, the sudden outbreak of COVID-19 has an adverse impact on the 5G chipset manufacturing facilities located around the world, as several countries are temporarily under lockdown that led to a significant slowdown in production. Therefore, this factor may act as a major obstacle to the market growth in the near future. However, high cost of hardware involved in terrestrial network densification, and data security & privacy concern among people are the factors limiting the growth of the market over the forecast period of 2020-2027.

The regional analysis of global 5G Chipset market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-Pacific is the leading/significant region across the world in terms of market share owing to the presence of significant number of internet users, followed by the higher adoption rate of smartphone in the countries, especially in China and India. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rise in investments in evolving 5G-enabled smartphones and base stations backing 5G New Radio (NR) frequencies would create lucrative growth prospects for the 5G Chipset market across Asia-Pacific region.
