The VR can be applied in multiple end use industries namely, science, advertising, medicine, entertainment and more. the VR is majorly used in Gaming and enhancing customer experience in entertainment industry. But all the use of VR necessitates a logistical compilation and an exponential increase in data usage. Thus, requiring high speed and volumes of data for an optimum VR experience which can be provided through 5G network connection. The 5G network has the essential bandwidth, low latency and high speed enabling a seamless VR experience. The massive adoption of VR in end-use industries such as retail and e-commerce drives the market. Further, the demand for high speed connectivity and augmented proliferation of connected devices and mobiles across the globe fuels the market growth. Connected devices with a poor connection endure high latency and low data rates which is solved by the 5G networks. As per Forbes, the addition of 5G brings about 10 times decrease in latency rates and also improves data rates. Thus, the growing use of VR through simple devices as smartphones and connected devices drives the market growth. As in June 2020, Verizon Media launched a new extended reality toolset under the name Verizon Media Immersive for creating augmented mixed, virtual reality advertising and branded content with a focus on next generation 5G experiences. While launch of the tech-enabled smartphones which can support VR supports the market growth. For Instance: HTC VIVE and Qualcomm technologies announced their collaboration to develop Vive's
