Global 5G New Radio Market is valued approximately at USD 32.6 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 29.1% over the forecast period 2023-2030. 5G New Radio (NR) is a standard for wireless communication and is a key component of 5G networks. It is designed to enable faster data rates, lower latency, and support a massive number of connected devices compared to previous generations of wireless technology. 5G NR operates in a wide range of frequency bands, including low-frequency bands (sub-1 GHz), mid-frequency bands (1-6 GHz), and high-frequency bands (above 6 GHz). The use of high-frequency bands, such as millimeter waves, allows for greater bandwidth and faster data rates.. The 5G New Radio Market is being driven by factors such as surge in data traffic and increasing use of advanced radio units such as massive MIMO and beamforming.

The 5G NR offers significantly faster data speeds and greater network capacity to meet these increasing data demands. With the proliferation of smartphones, Internet of

Things (IoT) devices, and other connected devices, there has been an exponential increase in data consumption worldwide. People are using more data-intensive applications such as video streaming, online gaming, and virtual reality, which require faster and more reliable network connectivity. 5G NR technology is designed to meet these growing demands by providing ultra-fast download and upload speeds, reducing latency for real-time applications, and supporting a massive number of simultaneous connections. According to IDC, the amount of data produced was estimated to reach 35 zettabytes by 2020, but it reached that level in 2018, and in 2020, approximately 59 zettabytes of data were created. IDC predicts that by 2025, newly created data will reach 175 zettabytes, representing a 146-fold increase between 2010 and 2025. This exponential growth in data creation has led to the data processing and storage market's valuation estimated to grow from USD 56 billion in 2020 to USD 90 billion by 2025. Thus, increasing data traffic and data consumption is fueling the growth of the market. In addition to global connectivity & cross-industry collaboration and government initiatives of deployment & adoption of 5G new radio create lucrative opportunities for the market. However, the high cost of 5G infrastructure and regulatory and environmental concerns hinders market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global 5G New Radio Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia Pacific dominated the market in 2022 owing to the presence of prominent manufacturers such as Huawei Technologies Co., Ltd. and Samsung. These manufacturers, known for their expertise in telecommunications and mobile technologies, contribute to the growth and development of 5G networks in the region. Additionally, there is a notable increase in investment aimed at establishing automated factories in the region. Asia Pacific is expected to be the fastest growing region during the forecasted period due to strong focus on technological advancements and industrial automation.
