Global 5G Technology Market to reach USD 1,271 billion by 2025.

Global 5G Technology Market valued approximately USD XX billion in 2017 is anticipated to grow with a healthy growth rate of more than 49.1% over the forecast period 2018-2025. The major driving factors of global 5G technology market are shift towards new broadband technology, growing demand for high data speed & stable growth in the mobile data traffic and increasing demand for broadband services over other mobile networks. Moreover, increasing demand for machine-to-machine communication in organizations is the other major factor that drives the market. The major restraining factor of global 5G technology market huge cost incurred in the implementations of base stations and O&M complexities. 5G, is the latest iteration of cellular technology, engineered to greatly increase the speed and responsiveness of wireless networks. With 5G, data transmitted over wireless broadband connections

could travel at rates as high as 20 Gbps by some estimates, exceeding wireline network speeds. 5G performance targets high data rate, reduced latency, energy saving, cost reduction, higher system capacity, and massive device connectivity. The major benefits of 5G technology are higher bandwidth can be used with the help of carrier aggregation feature, improved 5G network architecture handoff is smooth and hence it does not have any effect on data transfer when mobile user changes cells and antenna size is smaller at higher frequencies. This leads to use of massive MIMO concept to achieve higher data rates.

The regional analysis of Global 5G Technology Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North-America accounted the dominant share in the global 5G Technology Market. The region is characterized to the increasing number of subscribers and also the Federal Communications Commission has already started its project of the allocation of 5G frequencies. However, Asia-Pacific region is expected to grow over the forecast period 2018-2025 due to large consumer base and ongoing initiatives and developments on 5G technology.
