## Abstracts

Global 5G wireless ecosystem Market is valued approximately at USD 16.88 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 60.00% over the forecast period 2019-2026. The 5G technology is a revolutionary shift in the field of wireless networking to manage connectivity management for a number of machine-to-machine devices. Also, the 5G technology is expected to ease wireless networking management for a vast number of machine-to-machine devices. Deployment of 5G technology offer several advantages over 4G network such as high-speed data transmission and higher efficiency. The growth of the market is primarily driven by the rising usage of mobile devices and R&D initiatives taken by government to promote the adoption of 5G technologies. For Instance: The federal government has announced to invest around 40 million pound considering the 5G testing and trail projects across United Kingdom. This investment made by the government is aimed at government plans focused towards enhancement & improvement of mobile connectivity. Also, The federal government has already exceeded its aim to make around 500MHz of public sector spectrum available for commercial use by the end of the year 2020 & would continue to work with departments to explore opportunities for more spectrum to be made available, further paving the way for the growth and development of 5G infrastructure market. However, concerns related to data security and privacy is expected to impede the growth of the market over the forecast period.

The regional analysis of global 5G wireless ecosystem market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is expected to hold a notable share in terms of revenue owing to
