Abstracts

Global ACL Reconstruction Procedures Market is valued approximately XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XXX over the forecast period 2021-2027. ACL (Anterior cruciate ligament) is the most common type of injury in which the person suffers from a teared ligament. ACL reconstruction refers to a procedure in which the largest knee ligament is replaced generally performed by two methods, surgical and nonsurgical. Rising cases of sports injury such as football, basketball, downhill skiing, soccer, gymnastics and similar activities serves as a key driver for the market. According to a report, approximately 70% to 84% of ACL injuries are caused by a non-contact mechanism, such as a rapid deceleration, in a sports setting. According to Collins 2013, it has been calculated that around 80,000 to 100,000 people in the U.S. experience ACL reconstruction every year. Increasing number of children participating in different sports activities is likely to result into increased number of ACL injuries which will boost the market. Launch and addition of latest methods and devices are several factors contributing to the growth of the global ACL Reconstruction Market. For instance, Amplitude Surgical commercially introduced ACLip in 2017, and is an innovation for ACL Reconstruction. However, high procedure cost impedes the growth of the market over the forecast period of 2021-2027. Also, increasing generic population is likely to increase the market growth during the forecast period.

The regional analysis of global ACL Reconstruction Procedures Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to presence of key market players in the region and increased surgical reconstruction carried out for fractured ACL in the knee. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate over the forecast period 2021-2027. Factors such as rise in geriatric population in the region and increasing focus on sports activities would create lucrative growth prospects for the ACL Reconstruction Procedures Market across Asia-Pacific region.
