## Abstracts

Global Activated Alumina Market is valued approximately at USD 1.10 billion in 2022 and is anticipated to grow with a growth rate of more than 5.9 % over the forecast period 2023-2030. Activated alumina is widely recognized as an exceptional desiccant, offering a plethora of advantageous properties such as high crush strength, resistance to chemical attacks and thermal shock resilience, rendering it highly suitable for various industrial processes. Its extensive surface area and remarkable porosity position activated alumina as a versatile adsorbent, driving its utilization across a wide array of applications. The market growth is driven by key factors such as rising demand for clean water, increasing population, rapid economic growth, increased Demand from Oil and Gas Industry.

The demand for activated alumina is heavily influenced by its role as an essential adsorbent within the oil and gas industry. Specifically, in this sector, activated alumina finds widespread use in the removal of water from natural gas streams, a critical process in gas purification. With natural gas emerging as the fastest-growing source of domestic energy production, the establishment of new refinery projects becomes pivotal, driving segment growth. Particularly, China stands out as a major player in global oil production, with state-owned enterprises such as the China National Offshore Oil Corp. (CNOOC) dominating the industry. CNOOC's ambitious plans for oil and gas production, projected to increase by over 6% annually from 2022 to 2024, underscore its significance in ensuring China's energy security. Meanwhile, in India, the government has implemented various initiatives to meet escalating oil and gas demands, including

allowing 100% foreign direct investment (FDI) in several industry segments. Projections from the International Energy Agency indicate a steady rise in global oil demand, reaching 104.1 million barrels per day (mb/d) by 2026, with China and India contributing substantially to this growth. Considering these factors, the activated alumina market is poised for significant expansion in the foreseeable future. However, availability of activated alumina substitute stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Activated Alumina Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia-Pacific is leading the market growth of the activated alumina, both in terms of revenue growth and market share. This dominance is attributed to the region's significant refining capacities and the escalating demand for fresh water supply. Moreover, the surge in government investment in water treatment technologies and infrastructure, alongside the increasing demand for gas, is anticipated to fuel further market expansion in Asia-Pacific. Conversely, North America is forecast to witness the fastest growing region during the forecast period from 2023 to 2030. This growth trajectory is propelled by the expanding production and refinery expansion initiatives within the region.

### Recent Developments in the Market:

In October 2021, Shell plc and BASF SE forged a collaborative partnership aimed at assessing, mitigating risks associated with, and deploying BASF's Sorbead adsorption technology. Distinguished by its aluminosilicate gel material, Sorbead offers distinct advantages over conventional options like activated alumina or molecular sieves. Notably, Sorbead boasts lower temperature regeneration capabilities and demonstrates resilience against acids and water. Furthermore, the Sorbead adsorption technology ensures compliance with rigorous pipeline and underground storage regulations, ensuring the treated gas meets stringent glycol-free quality standards.

In February 2023, Evonik unveiled plans to expand its fumed aluminium oxide production facility in Yokkaichi, Japan. This expansion marks Evonik's inaugural alumina plant in Asia, with a dedicated focus on developing solutions for lithium-ion battery technology, widely utilized in electric vehicle batteries. The facility is slated to commence operations by 2025

In October 2022, Axens inked an Asset Sale Agreement (ASA) with Rio Tinto Alcan, based in Canada, pertaining to the sale of Rio Tinto Alcan's activated alumina business located in Brockville, Ontario, Canada. This strategic move is poised to unlock growth opportunities in emerging markets globally.
