## **Abstracts**

Global Acute Respiratory Distress Syndrome Treatment Market is valued at approximately USD xxx billion in 2022 and is anticipated to grow with a healthy growth rate of more than xx% over the forecast period 2023-2030. Acute Respiratory Distress Syndrome is a medical condition that can occur in response to various underlying causes, such as pneumonia, sepsis, trauma, or inhalation injury. ARDS is characterized by inflammation and fluid buildup in the lungs, which can lead to severe shortness of breath and respiratory failure. The Acute Respiratory Distress Syndrome Treatment market is expanding because of factors such as increasing cases of Preterm birth and growing prevalence of respiratory diseases. Treatment of ARDS typically involves supportive care, such as mechanical ventilation to help with breathing, supplemental oxygen, and medications to manage symptoms and prevent complications. Its prevalence has progressively increased during the last few decades.

According to the World Health Organization, every year, an estimated 15 million babies are born preterm. Furthermore, across countries, the rate of preterm birth ranges from 5% to 18% of babies born. Moreover, more than 90% of extremely preterm babies born in low-income countries die within the first few days of life, yet less than 10% of

extremely preterm babies die in high-income settings. Another important component driving space is increased prevalence of respiratory diseases. According to World Health Organization, Asthma affected an estimated 262 million people in 2019 and caused 455 000 deaths. In addition, Chronic obstructive pulmonary disease is the third leading cause of death worldwide, causing 3.23 million deaths. Nearly 90% of COPD deaths in those under 70 years of age occur in low- and middle-income countries in 2019. Also, increasing demand for diagnosis and rising technological advancement in medical testing devices would create a lucrative growth prospectus for the market over the forecast period. However, the high cost of Acute Respiratory Distress Syndrome Treatment stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Acute Respiratory Distress Syndrome Treatment Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to technological advancements and the availability of numerous cutting-edge pharmacological molecules to improve the therapeutic process. According to Statista, the prevalence of chronic obstructive pulmonary disease in the United States is expected to increase to around 11.6% among adults by the year 2050. Asia Pacific is expected to grow significantly during the forecast period, owing to an increase in biotechnology research and center activity in the market space.
