Abstracts

Global Aerospace Cold Forgings Market is valued at approximately USDXX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Aerospace cold forging is a special manufacturing process that is performed in order to deliver high dimensional precision and greater surface finish on aerospace parts and their components. The surging demand in commercial and defense aerospace, increasing air passenger traffic, coupled with the growing regional jet demand are the key factors soaring the global market demand. According to the World Data Bank, in 2015, the air passenger traffic was recorded at 3.47 billion people and it increased in 2019 to 4.56 billion passengers. Therefore, the rise in air traffic is burgeoning the demand for Aerospace Cold Forgings, which, in turn, excels the market growth across the globe. However, the rising usage of composite materials and a dearth of skilled professionals impede the growth of the market over the forecast period of 2022-2028. Also, the rising technological advancements and increasing government support are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Aerospace Cold Forgings Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Europe is the leading region across the world in terms of market share owing to the rising development of advanced manufacturing technologies and availability of funding by the regional aircraft manufacturing industry. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the surging demand for commercial aircraft, as well as rising investments in technological

advancements, would create lucrative growth prospects for the Aerospace Cold Forgings Market across the Asia-Pacific region.
