Abstracts

The Global Age-related Macular Degeneration (AMD) Drugs Market is currently valued at approximately USD 9.45 billion in 2023 and is forecasted to grow at an impressive CAGR of 10.70% over the forecast period from 2024 to 2032. Age-related macular degeneration, a leading cause of vision impairment in aging populations worldwide, has propelled significant innovations in pharmacological interventions. Advanced treatments, such as biologics and biosimilars, are shaping a new era of therapeutic efficacy, focusing on slowing disease progression and improving patients' quality of life.

Pharmaceutical advancements like Lucentis, Eylea HD, and the novel Syfovre, alongside emerging biosimilars, are fueling the market's growth trajectory. The rise in patient awareness about early intervention and increasing healthcare expenditure in ophthalmology further amplify the demand for AMD therapies. Notably, the integration of personalized medicine into treatment protocols is a defining trend, offering tailored solutions that optimize therapeutic outcomes while minimizing adverse effects. Despite these advances, the high cost of biologic drugs and regulatory complexities surrounding biosimilar approvals may pose challenges to market participants during the forecast period.

Regionally, the AMD drugs market exhibits diverse growth dynamics. North America commands the largest market share, underpinned by robust healthcare infrastructure,

high prevalence of AMD, and substantial investment in R&D initiatives. Europe follows closely, driven by strong government support and the adoption of advanced biologics. Meanwhile, the Asia-Pacific region is expected to record the fastest growth, attributed to increasing healthcare investments, rising geriatric populations, and enhanced access to ophthalmic care across emerging economies like China and India.
