Abstracts

Global Agricultural Micronutrients Market is valued approximately USD 3.6 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.7% over the forecast period 2021-2027.

Micronutrients are important and essential elements which are used by plants in small relatively lesser amount. The essential element only when can perform its role in plant nutrition properly enhances the growth, development and helps in plant metabolism. Increasing micronutrients deficiency in soil as well as rising focus on crop production and quality can be a driven factor for the market. Also, it helps in plant's growth and development which reduces the tension of farmers.

The Mosaic Company has come up with an agreement with the Technology Research Centre (FTRC) at the University of Adelaide in Australia to focus on enhanced and development of fertilizer efficiency, which was a great initiative. In 2019, Compass Minerals announced the launch of rocket Seeds Moly Shine seed finisher which has a great property of micronutrient. This launch marks a new addition to the company Plant Nutrition business unit.

Today's organic fertilizer industry is booming and making agenda for using organic

fertilizers for crop production can be a limiting factor. However, it is a fundamental for balanced nutrition and a tremendous tool to help farmers increase crop yield and quality and also can be beneficial for the growing population as the nutrients give all the necessary vitamins to plants.

The regional analysis of global Agricultural Micronutrients market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific has dominants the more than 40% of global agricultural micronutrient demand. It is because of the major contribution of Asia Pacific countries in agriculture field and produce near about 50% of global agricultural products.

Micronutrient deprivation is considered a serious nutritional concern in arable crops.

The need for agricultural micronutrients in Asia Pacific is being driven by increase in food grain demand and rise in micronutrient deprivation across the region.
