Abstracts

Global Agricultural Pheromones Market is valued approximately at USD 2.46 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 18.4% over the forecast period 2021-2027. Agriculture pheromones are specific pheromones, used for monitoring the target pests in agriculture areas, also by constantly monitoring of insects, it might be possible to detect infestation before its occurrence. The global Agricultural Pheromones market is being driven by proliferation of pest due to rapid climate change in various regions and increasing demand for sustainable crop protection solutions. Furthermore, rising global consumption of high-value crops and supportive regulations for semi chemicals, will provide new opportunities for the global Agricultural Pheromones industry. For instance, in year 2018, European union had ban on insecticide groups of neonicotinoids, such as thiamethoxam, clothianidin, imidacloprid and others in order to take the most cautious approach . As a result, increased supportive regulations for semi chemicals will necessitate the use of more Agricultural Pheromones, which will serve as a catalyst for the Agricultural Pheromones industry in the future. However, high maintenance and production cost of agricultural pheromones, may impede market growth over the forecast period of 2021-2027.

Asia Pacific, North America, Europe, Latin America, and Rest of the World are the key region considered for the regional analysis of global agricultural pheromones market. the widening scope of applications including agriculture, forestry and for the industrial
