Global Agriculture films Market is valued approximately USD 8.2 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 5.90% over the forecast period 2019-2026. Agriculture films are polymeric films that are used in plastic culture for soil protection, mulching and greenhouse. These films help to reduce the time taken for growing, earlier harvest and higher yields. Furthermore, these agriculture films decrease the exposure of soil and seeds thus conserve soil moisture and nutrients. Increasing population is subsequently increasing the demand for food. This is resulting in a growing demand for agriculture films. According to Harvard Business Review, food demand is expected to increase between 59% to 98% by 2050 as compared to 2016 due to rising population. With the rise in food demand, farmers need to increase the crop production by adopting new farming methods. This is significantly paving the demand for agriculture films in farming, hence driving market growth. Global focus on growing agriculture output and demand from the dairy industry are key driving forces in the market growth. Furthermore, technological advancements in horticulture is anticipated to create significant growth opportunity in the market over the forecast period. However, high installation cost of agriculture films impedes the growth of the market over the forecast period of 2019-2026.

The regional analysis of global Agriculture films market is considered for the key regions

such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the high adoption of advanced farming technique.
