Abstracts

The Global AI Governance Market was valued at approximately USD 612.94 million in 2023 and is poised to experience an extraordinary CAGR of 45.3% during the forecast period of 2024-2032, culminating in an estimated market size of USD 17693.29 million by 2032. This growth is attributed to the increasing necessity of governing artificial intelligence responsibly, fueled by ethical, legal, and regulatory challenges arising from AI's widespread integration across sectors like BFSI, healthcare, government, and defense.

AI governance frameworks are becoming critical to address concerns related to bias, transparency, accountability, and privacy in AI applications. Companies are proactively adopting AI audit tools, explainability frameworks, and compliance monitoring systems to ensure their AI models align with international standards. This growing emphasis on AI ethics has led to a surge in investments from both established firms and innovative startups.

The solution segment currently dominates the market due to its comprehensive offerings, which tackle key governance issues. Meanwhile, the cloud deployment segment is gaining traction, particularly among SMEs, for its scalability and cost-effectiveness. Geographically, North America leads the market, driven by strong regulatory frameworks and rapid AI adoption. However, Asia Pacific is expected to exhibit the highest growth rate during the forecast period due to increasing AI investments and government initiatives.
