Global AI in education Market is valued approximately at USD 2.5 billion in 2022 and is anticipated to grow with a growth rate of more than 1.5% over the forecast period 2023-2030. AI (Artificial Intelligence) is revolutionizing the field of education by introducing innovative technologies and tools that enhance the learning experience. AI in education refers to the integration of intelligent systems and algorithms to support various educational processes, from personalized learning to administrative tasks. One significant application of AI in education is personalized learning. AI algorithms can analyze student data, such as performance, learning styles and preferences to tailor educational content and provide personalized recommendations. This approach helps students learn at their own pace, address their individual needs, and improve their overall learning outcomes. Increasing use of Artificial Intelligence (AI) and growing EdTech Industry emerge as market elevators during the forecast period.

According to the India Brand Equity Foundation (IBEF) in 2021, the valuation of the

EdTech industry in India stood at USD 750 million in 2020, and it is expected to witness significant growth, reaching approximately USD 4 billion by 2025, with a compound annual growth rate (CAGR) of 39.77%. This growth is primarily fueled by the increasing demand for non-academic courses in tier II and III cities and the growing need for personalized learning experiences in the EdTech sector. Approximately USD 1.5 billion from the estimated market value of USD 4 billion is expected to be allocated to K-12 education, encompassing after-school foundational and pre-preparational courses within the AI in education market. According to Statista in 2023, the expected revenue for the global artificial intelligence market in 2022 was estimated to be USD 433 billion. The market is anticipated to experience rapid expansion and in forecast period it is expected to surpass the milestone of approximately USD 500 billion by 2023. However, legal and regulatory framework and complex implementation with the existing systems may hamper the growth of Global AI in Education Market. However, global reach and scalability and skill development & future workforce readiness are potential market growth opportunities.
