Abstracts

Global Aircraft de-icing Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5% over the forecast period 2021-2027. Aircraft de-icing is the process which ensure that all the sensors and engine inlets are clear of snow and ice. There are various kind of deicing systems and processes available in the market including weeping wing technology, ultrasound technology, electric heating and alloy deicing technology. The market is positively influenced by innovation and advancement in the technologies. Furthermore, the market is driven by the key factors such as increasing aircraft movement from the airports and increase in delay and inconvenience of flights. For instance, as per the Civil Aviation Ministry of India, total 5808 flights were cancelled or delayed due to the bad weather condition such as fog, in November 2020. Furthermore, more than 14062 number of passengers get affected due to the cancellation of flights. However, development of new methods and techniques for the reuse of de-icing fluid, may impede market growth over the forecast period of 2021-2027.

Globally, North America is dominating the market shares of aircraft de-icing market owing to increase in passenger traffic and increasing aircraft movement from the U.S. airports. Furthermore, North America is investing in deicing technologies and infrastructure to avoid future delay and inconvenience to the passenger as the United State airport is one of the busiest airport globally.
