Abstracts

Global Aircraft Nacelle and Thrust Reverser Market is valued approximately USD 4.2 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 6% over the forecast period 2022-2028. Aircraft nacelles are enclosed housings for turbine engines that are designed to be as streamlined as possible to reduce the aircraft's drag. Thrust reversers are an element of the engine nacelle system that divert exhaust gases to slow down the aircraft after landing. Clamshell doors that open and close at predetermined times are found on many thrust reversers. The most common aircraft having thrust reverser systems are passenger planes and large freight jets. While some aircraft, such as military planes, may use reverse thrust while in the air to perform steep descents, it is often used primarily on the ground. Safety features on private and commercial aeroplanes prevent thrust reversers from deploying while the plane is in the air. The proliferation of global air travel and the resulting need for new commercial aircraft are expected to propel the civil aircraft nacelle and thrust reverser industry forward. As per Statista, number of scheduled passengers boarded by airline industry reached 4.7 billion in 2019 from 1.9 billion in 2004. Furthermore, increase in defence spending is expected to create growth opportunity in the market. However, manufacturers face a problem in developing innovative technology for aeroplane

nacelles and thrust reversers because of the high R&D expenses involved.

The key regions considered for the global Aircraft Nacelle and Thrust Reverser Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. During the projected period, the North America is expected to increase at the fastest CAGR. North American countries such as the United States and Canada are focusing their investments in the aviation industry in order to keep up with European and Chinese manufacturers. The North American market is considered to be one of the strongest demand centres for aircraft parts and components, due to supportive legislation and attempts to reduce aviation emissions.
